Introduction

Building autonomous AI agents that think, plan, and act that's the obsession. Specialized in Agentic AI, LangGraph, RAG, and Knowledge Graphs, with hands-on experience architecting multi-agent systems that connect codebases, tools, and data into self-learning, reasoning-capable pipelines.

Education

Vignan's Institute Of Information Technology **2022 – 2026**
Bachelorof Technology in Artificial Intelligence *CGPA: 8.65*

Experience

UtrechtItConsulting **January 2026 - Present**
Associate Consultant Intern – Solace / Event-Driven Systems/Integration *Remote*

- Engineered an AI-native CRM platform using LangGraph with a multi-agent architecture that unified GitHub, codebases, coding agents, and meeting transcripts into a single context layer, enabling intelligent project management automation.
- Designed a Neo4j knowledge graph to model relationships between repositories, tasks, commits, and meetings, allowing agents to reason over project state and automatically update documentation and task tracking in real time.
- Built a self-learning, event-driven agent pipeline integrated with GitHub webhooks and Solace PubSub+/MQTT, delivering real-time task synchronization and reducing manual project management effort by approximately 70%.
- Developed specialized AI agents for code analysis, documentation, and orchestration with cross-session learning, improving task-classification accuracy from 75% to 92% through continuous PM feedback.

ZenithYuga Tech **June 2024 – December 2024**
FullStack Developer Intern (MERN + AI) *Remote*

- Built and deployed a full-stack e-commerce platform using MongoDB, Express, React, and Node.js, focusing on scalability and clean API design.
- Implemented productlistingpages and productdetail pages.
- Added user login and signup functionality.
- Implemented add to cart and remove from cart features.
- Integrated a simple LLM-based chatbot to answer basic product-related questions.

Cloud Eye Technologies **April 2024 – May 2024**
Generative AI Engineer Intern *Onsite*

- Built an AI-driven nutrition analysis platform using LLMs to analyze diet details from text-based user inputs, with a React.js-based frontend for user interaction.
- Designed and implemented an LLM inference pipeline using LangChain to extract food information, evaluate nutritional balance, and generate personalized health feedback.
- Implemented automated diet quality scoring, nutrient deficiency detection, and improvement recommendations using prompt engineered LLM workflows.
- Developed a complete end-to-end AI system from user input ingestion → AI analysis → structured health report generation and visualization in the frontend.

Projects

Memorae AI | *FastAPI, Python, Mistral, LangGraph, Qdrant, MongoDB, Neo4j, Composio* ***Demo--Live***

- Developed MemoraeAI, a persistent AI memory system using LangGraph and Mistral to detect, classify, validate, and prioritize user memories, with deduplication and conflict resolution to maintain accurate context across conversations.
- Designed a context-aware multi-database retrieval architecture using Qdrant, Neo4j, and MongoDB to combine semantic search, knowledge-graph relationships, user profiles, and goals, with Gmail integration via Composio for extracting relevant information from emails.

DevCopilot | *FastAPI, Python, FAISS, LangGraph, LangChain, React.js* ***Demo-Live***

- Developed DevCopilot, a multi-agent AI-powered codebase assistant that enables developers to understand, and analyze complex software repositories, using automated repository ingestion,and knowledge-graph-based code structure modeling to provide architecture-aware assistance.
- Designed and implemented a LangGraph-based multi-agent architecture with specialized Q&A, Code Generation, LLD Planning, and Pull Request Analysis agents, enabling intelligent task routing and providing developers with code explanations, architecture-aligned code generation.

Technical Skills

ProgrammingLanguages: C, C++, Javascript, Python.
Frameworks& Backend Technologies: ReactJs, NextJs, NodeJs, ExpressJs, FastAPI, MongoDB, Microservices Architecture.
Event-Driven & Messaging Technologies: Solace PubSub+, Event-Driven Architecture (EDA), Publish-Subscribe, Queues, Topics, MQTT, Asynchronous Messaging Patterns.
Generative AI & Agentic Systems: Langchain, Retrieval Augmented Generation(RAG), Langraph, CrewAI, AI Agents & MultiAgent Systems, GenAI Application Development.
Vector Databases: Pinecone, Qdrant, ChromaDB.
Core Computer Science: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), Complexity Analysis.
Tools & Platforms: Git, Firebase, Clerk.

Achievements

- **Awarded Top 4 in NationalTech Entrepreneurship summit 2024 BBICBengaluru**
- **Full Stack Developer of our team Caffeinated coders and a 3x hackathon winner**
- **Organized IWD hackathon , Sushacks hackathon 2025 , Supersus hackathon 4.0**
- **Technical lead at Google Developer Groups VIIT**
- **TechGig - Coding Gladiators Semi-Finalist**
- **Code Quest 3.0 (JNTU-V) winner**
- **Achieved 2 star rating in CodeChefand 1539 rating in Leetcode**
